

Franck NKOMA BAYEMA

# Graduate Software Engineer – Full Stack

**Profile**  
Engineering graduate specializing in software development, software quality, and testing, with hands-on experience on real-world projects in Java / Spring, REST APIs, Angular, and Flutter. Able to contribute to web and mobile application development up to deployment and cloud monitoring, with a strong focus on quality, reliability, performance, autonomy, and effective teamwork.

## SKILLS

|                                                                                                                                                                                            |                                                                                                                                     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| <b>Technical skills</b><br>Java, Python, Spring Boot, JavaScript, Angular, Node.js, Dart, Flutter, C, SQL, NoSQL (MongoDB, Neo4j), HTML, CSS, Mobile App Development, Unit Testing, JMeter | <b>Soft skills</b><br>Autonomy, fast adaptation, critical thinking, proactivity, responsible use of AI                              |
| <b>Versioning &amp; project management</b><br>Git, GitHub, GitLab, Jenkins, Scrum, Agile methodologies, Jira (Xray), Gantt                                                                 | <b>DevOps &amp; cloud</b><br>Docker, Kubernetes, Terraform, Ansible, AWS, Google Cloud, Prometheus, Grafana, TestFlight, Serverless |

## CERTIFICATIONS

Google Cloud: Associate Cloud Engineer (ACE) — TOEIC :English B2 (835) — AWS Cloud Practitioner (in progress) — ISTQB Foundation Tester — Responsible Design Of Digital Services Certification (INR)

## PROFESSIONAL EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                      |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------|
| <b>Full Stack Developer Apprentice</b><br><i>WAVE UP HEALTH</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>Poitiers, Sep. 2024 – Present</b> |
| Improved an existing healthcare application by designing functional mockups, analyzing compliance requirements for a certified platform, and producing technical documentation for submission. <b>Developed and deployed a mobile application with Flutter</b> : implemented an interactive map, integrated 3D elements, <b>prepared a dedicated testing environment</b> on TestFlight, designed a secure JavaScript API, and containerized the architecture with Docker, working autonomously and proactively to propose and implement solutions. |                                      |

## EDUCATION

|                                                                                                                                                                                                                               |                                                |

|                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Sales and Inventory Management Web Application</b>                                                                                                                                                                                                                                                                                                                                                                            |
| Designed and developed a web application to replace manual stock and sales tracking in notebooks. Implemented the backend in Java Spring and the frontend in Angular, delivering a solution that digitizes operations, improves data organization, and simplifies daily stock and sales management. The application enables the client to save significant time and money and to maintain a more precise view of best customers. |
| <b>Facial Emotion Detection System – Google Cloud Hackathon (Agentic AI)</b>                                                                                                                                                                                                                                                                                                                                                     |
| Developed a facial emotion detection system that recommends well-being activities. Integrated models trained by the team into the final solution via Vertex AI and deployed the web application with the recommendation and action logic.                                                                                                                                                                                        |
| <b>Sports Activities Management Application (BDS) – Project Lead</b>                                                                                                                                                                                                                                                                                                                                                             |
| Developed the backend of a sports activities management application for the BDS using Python (Flask). Designed API endpoints, structured the business logic, and coordinated task distribution within the team as project lead.                                                                                                                                                                                                  |
